CONTROL SYSTEM

If you appreciate user friendly menu programming and insist on the advantages of ISO/DIN programming, then the KELLENBERGER product will be the right choice.

Axis X, Y, C, U, Z and W are CNC controlled, as a standard with Fanuc 30i. Based on this controller we have created KELLENBERGER H2000-Software cycles, ensuring that the control will perfectly cover all the special requirements of jig grinding.

GRINDING MOTOR

Grinding motor 70S ATC with its extremely wide range of application, from $9'000\text{ min}^{-1}$ to $65'000\text{ min}^{-1}$. This grinding motor, and its state-of-the-art design is an absolute must for getting optimal use out of the grinding tool changer.

CBN DRESSING UNIT

CBN dressing unit with HF drive, for conditioning (dressing) vitrified and resinoid bond CBN grinding wheels.

MSS

MSS – multi-sensor-system for automatic suppression of "air grinding" and for automatic grinding wheel calibration.

MEASURING PROBE

Measuring probe for the automatic best fit of work-pieces.

ROTARY AND ROTARY TILTING AXES

A- and A-B axes in customized version are available as additional units.

KELLENBERGER H2000 COORDINATE GRINDING HEAD

High-grade rigidity and stiffness leads in duplicating the stock removal capability and cuts in half the spark out time.

Allows the combination of grinding and hard milling.

Significant boost in stroke speed and stroke frequency leads into reduced grinding cycle time.

Hydrostatic guided spindle bearing system allows circular accuracies within $< 0.5\mu\text{m}$ in planetary grinding.

Unparalleled U-axis capacity up to +47 mm increases the grinding autonomy.

MACHINE CONTROL

CONTROL SYSTEM FANUC 30i

- Max. number of path: 10 - 15 path
- Max. total number of control axes:
- 96 axes (72 feed axes, 24 spindles) / 10 path
- 72 axes (56 feed axes, 16 spindles) / 15 path
- Max. number of simultaneous control axes: 24 axes

The big capability of this model helps to realize an advanced multi axis machine tool. Thanks to a number of control axes, various machining processes can be executed at the same time. Its 5-axis machining function can achieve the machining of complex shape. It has the flexibility to control various types of machine tools.
